

# **PRESENTATION OF MY TOOLBOX**

**In my toolbox there are :**

- a marking gauge**
- chisels**
- a saw**
- a club hammer**
- a hammer**
- a tape measure**
- a press**
- drills**

**this is the saw in action**

**The saw is used to slide, to make the right length and also to make notches. it can cut wood and plastic ( picture ) . I used it to make the length setting so that i could better slide with the sliding table saw. The handsaw which is the best saw is simple to cut marvellously ! This is the carpenter's first tool !!!!!**

**The wood chisel:  
indispensable but very dangerous tool !**

**The chisel is one of the first indispensable tools for carpenter ! It's used to make notches !**

**To be removed from the material, its is also necessary to make mid wood assemblies so that 2 pieces fit in each other, BE careful !**

**The wood chisel is very dangerous because it has very sharp ends !**

## **Conclusion :**

**During your first year, you will learn to make a brain teaser .**

**You will learn to use different machines such a ribbon saw to plane and the circular saw.**

**Anyway, you're going to spend a  
a great year !!!!!**
